

Part number:

**HYDROMA**

HYDRAULICKÉ SYSTÉMY

**HIDROMA  
SYSTEMS**

UKŁADY HYDRAULICZNE

**HYDROMA**

ГИДРАВЛИЧЕСКИЕ СИСТЕМЫ

# FPD-MDF

## PRESSURE FILTERS

### MATERIALS

Head: Cast iron

Bowl: Steel

Seals: NBR Nitrile

(FKM - on request fluoroelastomer)

Indicator housing: Brass

### PRESSURE

Max working: 31,5 MPa (315 bar)

Collapse, differential for the filter element (ISO 2941):

21 MPa (210 bar)

### WORKING TEMPERATURE

From -25° to +110° C

### COMPATIBILITY (ISO 2943)

Full with fluids: HH-HL-HM-HV-HTG

(according to ISO 6743/4)

For fluids different than the above mentioned,  
please contact our Customer Service.

## PRESSURE FILTERS

### MAINTENANCE

The best time to change your filter element is just before it reaches its maximum dirt-holding capacity. For this reason, we recommend to monitor the pressure of the hydraulic oil flowing through the filter with a clogging indicator. When it is time to change the filter element, switch off the system before opening the filter housing and make sure there is no pressure in the filter. Unscrew the bowl and remove the dirty filter element. Replace it with an original UFI element, verifying the

part number on the filter label or on the catalogue. Clean the bowl; check the gaskets conditions and replace if necessary. Insert the clean element into his seat, handling with care and cleanliness. Screw the housing until it stops, with a tightening torque of 70 Nm +5/0. We recommend the stocking of a spare UFI filter element for timely replacement when required.

### FILTER ELEMENT

	A	B	C	Kg	AREA (cm <sup>2</sup> ) Media H+
EPB01 CCH003	16	33	100	0,14	270
EPB12 CCH152	25	45	116	0,55	475
EPB21 CCH301	23,5	52	115	0,40	975
EPB22 CCH302	23,5	52	210	0,55	1.785
EPB31 CCH801	42,5	78	118	0,70	1.470
EPB32 CCH802	42,5	78	210	1,30	2.695
EPB33 CCH803	42,5	78	330	1,60	4.325
EPB34 CCH804	42,5	78	430	1,80	5.685

The used filter elements cannot be cleaned and are classified as "Dangerous waste material". They must be disposed according to local laws by authorized Companies.

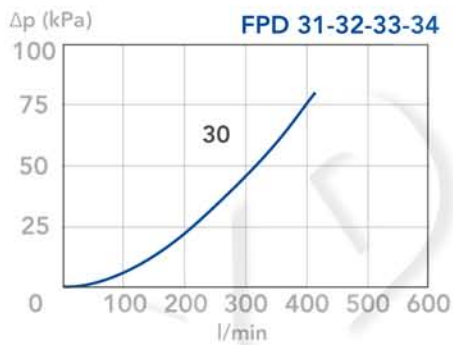

Verify that the Company you choose has the expertise and authorization to dispose this type of waste material.

## PRESSURE DROP CURVES ( $\Delta P$ )

The "Assembly Pressure Drop ( $\Delta p$ )" is obtained by adding the pressure drop values of the Filter Housing and of the Clean Filter Element corresponding to the considered Flow Rate and it must be

lower than 120 kPa (1,2 bar) and should never exceed 1/3 of the bypass valve setting

FILTER HOUSING PRESSURE DROP  
(mainly depending on the port size)

### N.B.

All the curves have been obtained with mineral oil having a kinematic viscosity 30 cSt and specific gravity 0,86 Kg/dm<sup>3</sup>; for fluids with different features, please consider the factors described in the first part of this catalogue. All the curves

are obtained from test done at the UFI HYDRAULIC DIVISION Laboratory, according to the specification ISO 3968. In case of discrepancy, please check the contamination level, viscosity and features of the fluid in use.
