M50

Applications

M50 valves have symmetric bodies: thanks to this design it is possible to change the control side in every moment, reversing the spool 180°. These monoblock valves can be easily transformed from right inlet (R) to left inlet (L) and vice versa.

In addition to the high flexibility of other families M50 monoblock valve allows the possibility to choose the control side, thanks to the symmetric body design; it can be easily adapted to many different applications always fitting the specific needs (Cranes and aerial platforms, Compactor, Hook and Skip loaders, Minidumper).

The valve is available with manual, cable, hydraulic remote, pneumatic, electrohydraulic and electropneumatic controls. Dump valve versions are available on request (hydraulic or electric 12 Vdc and 24 Vdc operated).

Special circuits and solutions are available for stabilizers applications. Special spools and options are available for truck mounted crane applications.

The specifications detailed in this catalogue show standard products. Special applications are available to order subject to contacting our Engineering Department for an estimate. The data and specifications indicated are to be considered a guide only and Hydrocontrol S.p.A. reserves the right to introduce improvements and modifications without prior notice. Hydrocontrol is not responsible for any damage caused by an incorrect use of the product.

GENERAL SPECIFICATIONS

Standard working conditions

Description	Value
Ambient operating temperature range	-40°C / +60°C
Kinematic viscosity range	10 ÷ 300 cSt
Max contamination level	9 (NAS 1638) - 20/18/15 (ISO 4406:1999)
Recommended filtration level	$\beta_{10} > 75$ (ISO 16889:2008)
Internal filter (on electroproportional valves pilot line)	30 μm

All information and diagrams in this catalogue refer to a mineral base oil VG46 at 50°C temperature (32 cSt kinematic viscosity)

Fluid options

Types of fluid (according to ISO 6743/4) Oil and Solutions	Temperature (°C)		Compatible gasket
	min	max	
Mineral Oil HL, HM (or HLP acc. to DIN 51524)	-25	+80	NBR
Oil in water emulsions HFA	+5	+55	NBR
Water in oil emulsions HFB	+5	+55	NBR
Polyglycol-based aqueous solution HFC	-10	+60	NBR

For special applications and different fluids, please call our Technical Department.

ORDER EXAMPLE

M50/1: IRPV 301 150 W001A H001 F001A 01 PA 120 05 PB MJ A G030303

 IRPV 301 150
 W001A H001 F001A 01 PA 120 05 PB
 MJA G030303
P006/1 N10

The painting is indicated with the following value:

P006 - /1 - N10

Hydraulic schematic M50

Parallel circuit

When the spool is operated it intercepts the switch gallery by diverting the flow of oil to service port A or B. If two or more spools are actuated at the same time, the oil will power the service port that has the lower load by selecting the path with the least resistance; by throttling the spools, the flow of oil can be divided between two or more service ports.

Parallel-Tandem circuit

When the spool is operated it intercepts the switch gallery by diverting the flow of oil to service port A or B. The tandem circuit is powered by the switch gallery thus permitting the use of just one work section at a time. The section downstream from the tandem section that has been actuated does not operate, the upstream section has priority.

DIMENSIONS
Dimensions M50 (PB-TB)

TYPE	M50/1	M50/2	M50/3	M50/4	M50/5	M50/6	M50/7
X (mm)	73	110	147	184	221	258	295
Y (mm)	107	142	177	212	252	292	327
Weights (kg)	3,8	5,5	7,3	9,0	10,8	12,6	14,3

Fixing specifications:

HC-M50 PB / HC-M50 TB = N. 3 drills diameter 8,5 (length 46 mm)

Dimensions M50 (PV-TV)

TYPE	M50/1	M50/2	M50/3	M50/4	M50/5	M50/6	M50/7
X (mm)	73	110	147	184	221	258	295

	pressure (bar)	
	at full flow	at min. flow
A	20 - 120	
B	121 - 150	
C	151 - 250	91-A / 220-A
D	251 - 350	221-A / 380-A

Anticavitation valve curve

INLET ARRANGEMENT

Depending on the circuit type and on the auxiliary valves presence, find four different kinds of models:

Inlet side classification (parallel standard version)			
code	description	schema	configuration
IRPB	Monoblock valve with right inlet section (standard version)		
ILPB	Monoblock valve with left inlet section (standard version)		
IRPV	Monoblock valve with right inlet section (with auxiliary valves)		
ILPV	Monoblock valve with left inlet section (with auxiliary valves)		
Inlet side classification (parallel-tandem version)			
code	description	schema	configuration
IRTB	Monoblock valve with right inlet section (tandem version)		
ILTB	Monoblock valve with left inlet section (tandem version)		
IRTV	Monoblock valve with right inlet section (tandem version with auxiliary valves)		
ILTV	Monoblock valve with left inlet section (tandem version with auxiliary valves)		

Valve identification

type	schema	layout	description	type	schema	layout	description
1			Direct acting pressure relief valve	3			Relief valve plugged

NOTE:

Monoblock valves can be equipped with externally piloted valve, solenoid dump valve (12-24 Vdc), clamping valve. These applications needs a special valve body. Ask our commercial dept. for further informations.

Valve arrangement

Combination valve example: 301 = 1B

- 301 Combination valve
- 1B Pressure relief valve in port B

The code identifies:

with a number, the type of valve; with a letter its position on the inlet section.

(A) = spool action side (B) = spool return action side

NOTE:

when ordering a main relief valve it is necessary to specify setting (example 150 bar).

valves combination		M50 - IR	M50 - IL
1A	201		•
3A	203		•
1B	301	•	
3B	303	•	

WORK SECTION ARRANGEMENT

Spool identification

order example of spool: **W001 A J10**

- W001** spool schema 3 positions double-acting
- A** spool type spool with 45 l/min inlet flow
- J10** restricted service ports restriction on diameter (0,10 mm in A and B)

W001	3 positions double-acting	
W002	3 positions double-acting A and B to tank	
W003	3 positions double-acting A to tank B blocked	
W004	3 positions double-acting A blocked B to tank	
W005	3 positions single - acting on A	
W006	3 positions single - acting on B	
W012	4 positions double-acting with float in the 4 th position	

spools with restricted service ports				
code	circuit	restriction on diameter (mm)	section (mm ²)	hydraulic schema
J10	A-B IN T	0,10	2,66	
K10	A IN T	0,10	2,66	
Y10	B IN T	0,10	2,66	

Depending on the inlet flow, it is possible to choose appropriate spool sizes.

CODE	SPOOL TYPE AVAILABLE		
	spool 50 l/min inlet flow	spool 30 l/min inlet flow	spool 15 l/min inlet flow
	A	B	C
W001	W001A	W001B	W001C
W002	W002A	W002B	W002C
W003	W003A	W003A	W003C
W004	W004A	W004A	W004C
W005	W005A	W005B	
W006	W006A	W006B	
W012	W012A		

NOTE:

- W012 spool need a special machining on the valve body.
- Float spool (W012) need special detent kit (F005).
- Different spools are available on request.

Plaease contact our Sales department for more information.

Spool actuation classification for manual control

code	description	dimensions	configuration
H001	Protected lever		
H002	Protected lever rotated 180°		
H004	Control without lever		
H019	Protected lever with stroke limiter		
H020	Protected lever rotated 180° with stroke limiter		

Spool actuation classification for Hydraulic control

code	description	dimensions	configuration
H005 <small>leave out the spool return action code</small>	Hydraulic actuation with side ports BSP ports = G 1/4 UNF ports = 9/16-18 UNF		

Joystick control classification

The configuration of joystick control interests always two working sections with relative four ports:

A1 – B1 – A2 – B2.

For convention:

- section 1 is the first invested from the flow of the oil: it depends from the right or left inlet of the control valve
- Port A = spool action side
- Port B = spool return action side

The position of the fulcrum is identified by a code and stands in four configurations as shown in the following table:

Fulcrum Inlet side	FULCRUM 1 st section	FULCRUM 2 nd section
RIGHT INLET	<p>H009</p> <p>Right side inlet fulcrum on 1st section (compulsory code for second section: H120)</p>	<p>H010</p> <p>Right side inlet fulcrum on 2nd section (compulsory code for first section: H120)</p>
	<p>H011</p> <p>Left side inlet fulcrum on 1st section (compulsory code for second section: H120)</p>	<p>H012</p> <p>Left side inlet fulcrum on 2nd section (compulsory code for first section: H120)</p>
LEFT INLET		

The second section concerned the configuration of the joystick control is always identified with code H120. Lever has to be ordered separately.

Spool return action classification - Springs load values

Spool return kits have three different spring types; following the codes depending on spring loads.

Spring type			
Type - Code	A (standard spring)	B (soft spring)	C (heavy spring)
Preloading	140 N	130 N	175 N
End of stroke	200 N	170 N	235 N
Spool return action identification example			
Type - Code	F001A	F001B	F001C

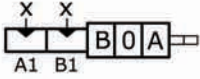

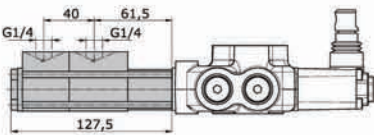

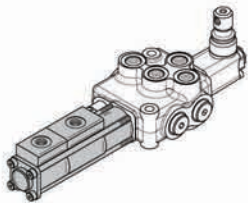

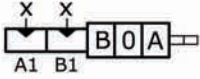

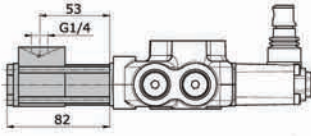

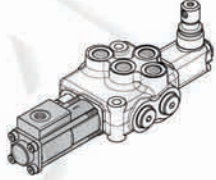

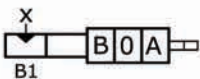

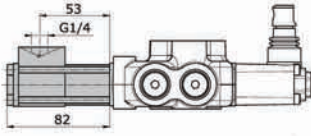

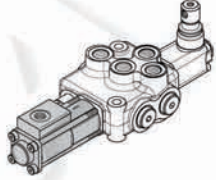

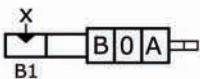

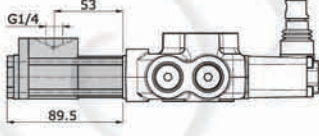

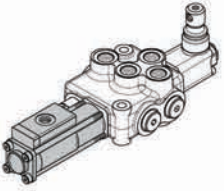

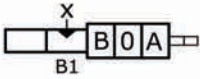

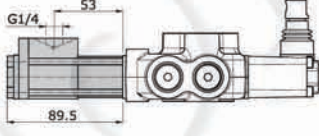

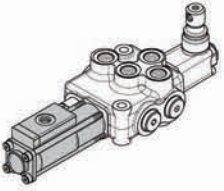

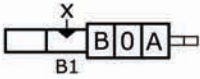

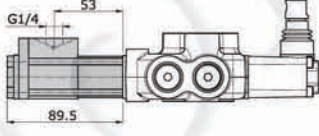

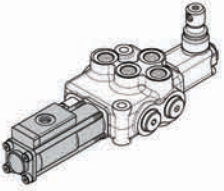

code	description	schema	dimensions	configuration
F001A F001B F001C	3 positions spring-centred spool			
F002A	3 positions spring-centred spool detent in A and B			
F003A	3 positions spring-centred spool detent in A			
F004A	3 positions spring-centred spool detent in B			
F005A	4 positions spring-centred spool detent in 4 th position (only for W012 spool)			
F009A	2 positions in A spring-centred spool			
F010A	2 positions in B spring-centred spool			
F011A	2 positions detent in A spring-centred spool			
F012A	2 positions detent in B spring-centred spool			

code	description	schema	dimensions	configuration
F013A	3 positions spring-centred spool prearrangement dual command			
F014A	3 positions spring-centred spool with stroke limiter			
F149	3 positions detent without return spring			

Pneumatic control classification

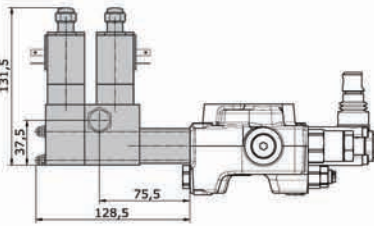

code	description	schema	dimensions	configuration
F020A	Pneumatic control ON - OFF			
F021A	Pneumatic control ON - OFF rotated 180°			
F022A	Proportional Pneumatic control		<p>Proportional control with port BSP: G 1/8</p>	
F023A	Proportional Pneumatic control rotated 180°			

Load limit classification

code	description	schema	dimensions	configuration
F024A F024C	Load limit in A and B			
F025A F025C	Load limit in A and B rotated 180°			
F026A F026C	Load limit in A			
F027A F027C	Load limit in A rotated 180°			
F028A F028C	Load limit in B			
F029A F029C	Load limit in B rotated 180°			

NOTE: on request is available the load limit with dual control; for more informations please contact our Commercial Dept.

Electropneumatic control identification

code	description	dimensions	configuration
F0620	3 positions electropneumatic control ON-OFF (12 vdc) 7 W - 0,58 A	Minimum working pressure 5 bar	
F0630	3 positions electropneumatic control ON-OFF (24 vdc) 7 W - 0,29 A		

Control tie rod assembly

The lenght of the control tie rod, will change depending on the section numbers; in this way it will be easy to install in the right way the sections and avoid any misassembly. Each kit is composed by 1 tie rod and 2 plugs.

NOTE: the control tie rod kit has always to be ordered separately.

Order code for control tie rod:

- 320103013** = control tie rod /1
- 320102007** = control tie rod /2
- 320102008** = control tie rod /3
- 320102009** = control tie rod /4
- 320102010** = control tie rod /5
- 320102011** = control tie rod /6
- 320102012** = control tie rod /7

Electrical load limit kit classification

ELECTRICAL LOAD LIMIT KIT SPECIFICATIONS			
Power supply	Contacts capacity	Protection degree	temperature range
12 vdc	3 A	IP 65	da -25°C a +90°C
24 vdc	1,5 A		

Operational diagram

CONTROL in A e B = connect PIN 1 - 4 and 2 - 3
CONTROL in A = connect PIN 2 - 3
CONTROL in B = connect PIN 1 - 4

Wiring diagram

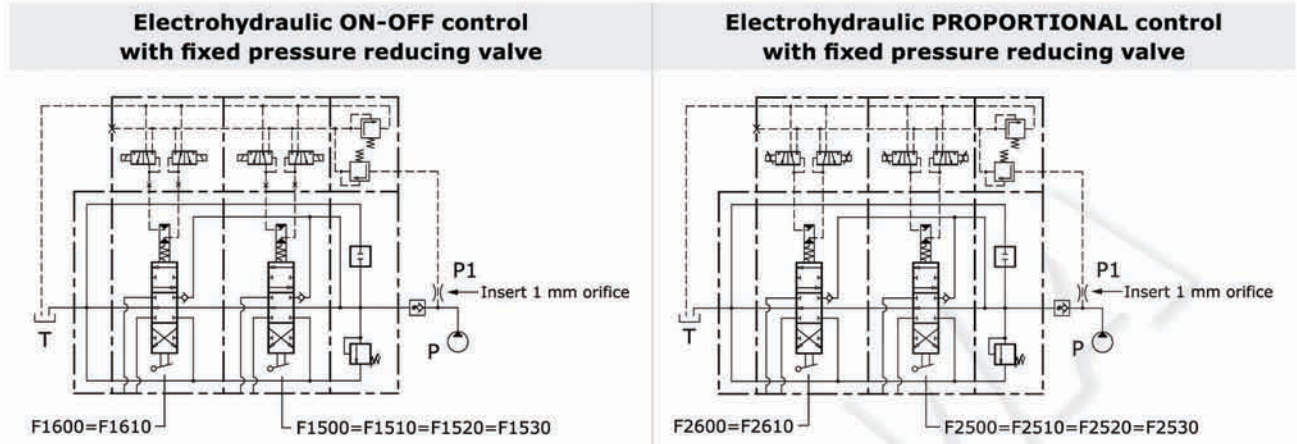

In case of inductive loads it is advisable to connect the terminals of the workport (solenoid) to a 200 VDC - 3A diode.

code	description	dimensions	configuration
F0360	Electrical load limit (normally closed contacts)		
F0370	Electrical load limit rotated 180° (normally closed contacts)		
F0450	Electrical load limit (normally open contacts)		
F0460	Electrical load limit rotated 180° (normally open contacts)		

NOTE: a HIRSCHMANN female connector, type G4 W1F, is available on request (code 413000045, to be ordered separately).

Electrohydraulic control specifications

Operating temperature range	-20°C / +80°C
Max inlet pressure	350 bar
Reduced pressure	16 bar
Back pressure on (T)	3 bar
Filtering degree	25 μ assoluti
Raccommended pilot pipe size	Ø 6 mm - G 1/4

Proportional control kit, mechanically retrooperated, allows the maximum precision of positioning, limiting the hysteresis. The control is operated with PWM control of the current. PWM frequency suggest: 60-80 Hz

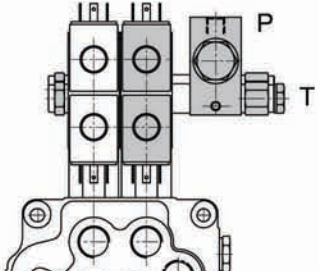

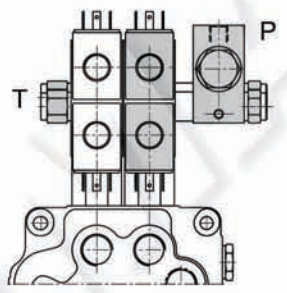

REGULATION CURRENTS			
Nominal voltage (V)	Resistance R ₂₀ (Ohm)	Current min (A)	Current max (A)
12 vdc	3,7	0,9	1,7
24 vdc	15,5	0,45	0,85

Electrohydraulic control classification

code	description	dimensions	configuration
F1600	3 positions electrohydraulic control ON - OFF 12 Vdc		
F1610	3 positions electrohydraulic control ON - OFF 24 Vdc		
F2600	3 positions electrohydraulic control PROPORTIONAL 12 Vdc		
F2610	3 positions electrohydraulic control PROPORTIONAL 24 Vdc		

Electrohydraulic ON-OFF control is stackable with electrohydraulic PROPORTIONAL control (F2600 = F2610). Control kit already includes orifice to make spool displacement more gradual.

Electrohydraulic control with fixed pressure reducing valve classification

code	description	configuration
F1500	Electrohydraulic control ON - OFF (fixed pressure reducing valve) P - T inlet side (12 vdc)	 <p>Port BSP (P - T) = G 1/4 Port UNF (P - T) = 9/16"18 UNF</p>
F1510	Electrohydraulic control ON - OFF (fixed pressure reducing valve) P - T inlet side (24 vdc)	
F2500	Electrohydraulic control PROPORTIONAL (fixed pressure reducing valve) P - T inlet side (12 vdc)	
F2510	Electrohydraulic control PROPORTIONAL (fixed pressure reducing valve) P - T inlet side (24 vdc)	
F1520	Electrohydraulic control ON - OFF (fixed pressure reducing valve) P inlet - T outlet (12 vdc)	 <p>Port BSP (P - T) = G 1/4 Port UNF (P - T) = 9/16"18 UNF</p>
F1530	Electrohydraulic control ON - OFF (fixed pressure reducing valve) P inlet - T outlet (24 vdc)	
F2520	Electrohydraulic control PROPORTIONAL (fixed pressure reducing valve) P inlet - T outlet (12 vdc)	
F2530	Electrohydraulic control PROPORTIONAL (fixed pressure reducing valve) P inlet - T outlet (24 vdc)	

Control tie rod assembly

The length of the control tie rod, will change depending on the section numbers; in this way it will be easy to install in the right way the sections and avoid any misassembly. Each kit is composed by 2 tie rods, 2 plugs, 2 connection ports and spacers according to the section number.

NOTE: the control tie rod kit has always to be ordered separately.

Reducing valve, combined with electrohydraulic control kit has to be calculated as a normal working section.

ORDER EXAMPLE:

Complete valves with 3 sections F1600 requires a complete tie-rod kit /3.

Complete valves with 2 sections F1600 and 1 section with F1500 (reducing valve) requires a complete tie-rod kit /4.

Order code fixed pressure reducing valve:

915000303 = reducing valve for BSP ports

915000312 = reducing valve for UNF ports

Order code for control tie rod (BSP):

320103001 = control tie rod /1

320102001 = control tie rod /2

320102002 = control tie rod /3

320102003 = control tie rod /4

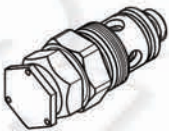

320102004 = control tie rod /5

320102005 = control tie rod /6

320102006 = control tie rod /7

Auxiliary valve identification

code	description	schema	sonfiguration	setting range (bar)			
				type	at full flow	type	at min. flow
01 PA	Antishock valve (port A)			A	20 / 80	A	
				B	81 / 120	B	
				C	121 / 150	C	
				D	151 / 250	D	95-A / 220-A
				E	251 / 350	D	221-A / 350-A
02 PA	Anticavitation valve (port A)						
05 PA	Prearrangement for auxiliary valve (port A)						

code	description	schema	sonfiguration	setting range (bar)			
				type	at full flow	type	at min. flow
01 PB	Antishock valve (port B)			A	20 / 80	A	
				B	81 / 120	B	
				C	121 / 150	C	
				D	151 / 250	D	95-A / 220-A
				E	251 / 350	D	221-A / 350-A
02 PB	Anticavitation valve (port B)						
05 PB	Prearrangement for auxiliary valve (port B)						

Auxiliary valve - Setting range

Sections designed to house auxiliary valve option require double choice on work ports A and B. Always indicate setting value when using antishock valve:

01 PA (120) = setting at full flow

01 PA (120-A) = setting at min. flow

Tandem circuit identification

Three different solutions are available for tandem circuit monoblocks:

- tandem circuit on 1st section
- tandem circuit on 2nd section
- tandem circuit on 1st and 2nd section

code	description	hydraulic schema
T1	Tandem circuit on 1 st section	
T2	Tandem circuit on 2 nd section	
T12	Tandem circuit on 1 st and 2 nd section	

Order example

M50/1: IRTB 301 150 W001A H001 F001A MJA T1 G030303

MJA P - T on the top / top ports A - B
T1 Tandem circuit on 1st section
G030303 P - T - A - B (thread G 3/8)

NOTE: Choosing a tandem circuit means using a special valve body. For different circuit combinations, ask our Technical-Sales Dpt.

OUTLET ARRANGEMENT

This code indicates characteristics for outlet section: ports position and thread, simple T port or HPCO connection. It is possible to have simple T port or two ports configuration for HPCO connection: HPCO allows to extend by-pass channel and connect to a second valve. T ports dimensions and threads depends on the valve size.

Order example - version 1 Outlet

M50/1: IRPB 301 150 W001A H001 F001A **MJ A G030303**

OUTLET ARRANGEMENT:

1. **MJ** outlet type
2. **A G030303** outlet position and available thread type

Rif.	Code	Description	Page

CARRY-OVER CONNECTION (HPCO)

This option, available on all M45, allows the sectional valve to feed a second valve, by extending the free flow channel. In this configuration, the valve need a separated port for connection to tank.

It is possible to transform monoblock valve from standard to HPCO version just by ordering the appropriate conic plug:

code (HPCO Plug identification)	description	q.ty
413010210	conic plug 1/4" x 6,5	1

INSTALLATION

Guidelines

- Mount the control valve securely to a flat surface (recommended 3 point fixing); at the time do not use a hammer to positioning by hitting.
- When handling the monoblock valve, be careful not hold the pilot cover or return spring cap of the spool or accessory valves such as main relief valves.
- Clean piping materials sufficiently before use.
- Make sure to prevent the port openings from being entered with dust or foreign matters.
- Tighten the port connectors surely with the recommended fastening torques.
- Do not direct the jet of a pressure washing unit directly to the valve.

Fittings tightening torque (Nm)

thread type	port P	Port A - B	Port T/HPCO
BSP (ISO - 228)	G 3/8	G 3/8	G 3/8
with rubber sealing (DIN 3869)	40	40	40
with copper or steel and rubber washer	40	40	40
